

TECH REPORT #80  
DEIMOS INSTRUMENT KEYWORD & DATA DICTIONARY  
S. Allen, D. Clarke, R. Kibrick, D. Tucker

Report is located at:  
<http://www.ucolick.org/cgi-bin/Tcl/demos.cgi>

The link above generates an up to date version of LOTR #80 from currently valid data.

To see the keyword dictionary for the motors, enter "deimot" in the blank, select "memes by name" from the buttons below, then push "Run Report."

To see the keywords for the CCD control subsystem, enter "deiccd" instead of "deimot," select "memes by name," then push "Run Report."

the data dictionary is more or less correct still, though the tables containing mask definition data have changed since CDR time.

the URL above \*generates\* an up to date version of the doc from currently valid data, the same data from which we build the software. it is almost always true to the current working version of the control software, except when it is a few hours or a day ahead (i.e. development going on that has not yet been installed).
